**Re: PMRA re-evaluation decision for products containing abamectin**

Dear valued partner,

As a result of the completed re-evaluation of abamectin by the Pest Management Regulatory Agency (PMRA), changes are coming that will affect how products formulated with abamectin can be used.

Syngenta will be amending the registered labels for impacted abamectin products, including **AVID® 1.9% EC Miticide/Insecticide** (Reg. No. 24485). New label directions will apply as of July 31, 2027.

**There is no impact to use of the product in 2025 or 2026.**

The PMRA's decision permits Syngenta and retailers to distribute products with the currently registered labels until **July 31, 2027**. After this date, all impacted abamectin-containing products sold will need to bear an amended label.

Users also have until July 31, 2027, to transition to using affected products in accordance with the amended labels.

Syngenta is evaluating the compliance requirements of the PMRA's decision and developing a plan to support transition to the amended labels. Additional information, including an updated AVID 1.9% EC Miticide/Insecticide label and details on the remaining inventory and relabeling, will be provided at a future date.

In the meantime, the PMRA's final decision detailing the required label amendments is available [here](#).

Please contact your Syngenta representative or call our Customer Interaction Centre at 1-877-SYNGENTA (1-877-964-3682) for more information about AVID 1.9% EC Miticide/Insecticide.

Sincerely,

**Sarah Osborne**
