

Manage Water, Manage Money

Conserve Water & Stretch Your Budget
Save 30%

Water has become an expensive and diminishing resource. Growers are facing challenges as regulations are clamping down on water supplies. So what can you do to ensure that your plants are top quality while staying within strict watering guidelines? Aquatrols has a solution.

AquaGro L can help you stretch your water supply and your budget by optimizing the efficiency of your irrigation system. AquaGro L moves water (and everything it carries) uniformly into and throughout the rootzone. University research and grower experience have proven that plants thrive when AquaGro L is applied throughout production.

- Produce healthy plants with up to 30% less water
- Water less = savings on labor costs and reduced energy costs.
- Comply with water restrictions and regulations without your budget or your plants drying up.
- AquaGro L is easy to inject with fertilizer, or tank-mix with many soil-directed drenches.

For fractions of a penny per pot you can easily comply with Best Management Practices for water management and conservation and save money.
