

**Éra Prevent** is a plant amendment specially developed to improve plant vigor. Composed of a natural source of oligochitosan and salicin it stimulate also plant immune system.

### ✦ Main advantages

- ✦ **Stimulates flowering**, photosynthetic activity, and fruit **yields**.
- ✦ **Increases plant resilience** to drought, heat, and salt.
- ✦ **Enhances the bioaccumulation of specific secondary compounds**, such as phenolic compounds, tannins, and capsaicinoids.

### ✦ Application mode

For best result, dilute directly in the tank with fertilizers and supplements and use the mixture within 24 hours. Apply when UV is low, starting at 15°C.

Type of cultures	Application rate	Application frequency
Potted plants	To soil or foliage 2.5 mL/L  0.3 to 0.5 L/ha	At transplanting or 3-5 leaf stage and then, every 2 weeks.
Horticultural field crop		
Indoor cultures		
Turf	0.5 à 0.75 L/ha	Every 2 weeks.

**Available formats**

## Éra Prevent

### Stimulate immunity to boost yields

Éra Prevent combines two powerful natural molecules that stimulate plant immunity as well as plant flowering. Used at the right time, it can make a big difference in the yields!

#### Advantage 1

Activates the plant **immune system**

#### Advantage 2

Stimulates **flowering** and yields
