

Pre-emergent weed control in container-grown ornamentals

Specticle® G pre-emergence herbicide combines long-lasting, broad-spectrum weed control with an outstanding granular carrier for use on over 100 ornamental crops.

Best uses

- Apply over the top of dry foliage to selectively prevent many broadleaf weeds, grasses and annual sedges
- Apply in fall for continuous weed control into the following growing season
- Control 50 common weeds such as bittercress, groundsel, oxalis, spurge, crabgrass, annual bluegrass and mouse-eared chickweed

Attributes of Specticle G

- Up to eight months of residual weed control
- Reduces labour costs with fewer applications and less cleanup work
- Verge® carrier provides dust-free application with uniform particle distribution
- Excellent plant safety
- Unique mode of action makes it ideal for rotation and resistance management
- No signal word

Application rates

- Apply Specticle G as an over-the-top application to container-grown plants at a rate of 224 kg/ha (2.24 kg/100 m²) or 336 kg/ha (3.36 kg/100 m²)
- Following application, irrigate with 6 mm of water within one hour to wash granules from the leaf surface and activate the product into the soil
- Specticle G is available in 20 kg bags

Sustainability

- Low use rate
- Reduces labour costs with fewer applications and less cleanup
- Indaziflam has a unique mode of action that inhibits root development during germination, making it ideal for rotation and resistance management
- Specticle G is long lasting and controls multiple tough weeds. Specticle G offers a high degree of plant safety on a wide range of ornamentals

Active ingredient
indaziflam 0.0224%

Group
29 herbicide

Formulation
granular

Packaging
20 kg bag
